

ABSTRACT OF THE DISCLOSURE

A disposable pant garment is made from a web by joining front and back side panels attached to the garment chassis. The side panels have diagonal edges in order to result in side seams on the garment which run diagonally on the garment side. This diagonal side seam provides superior fit and releasability, especially in the case of refastenable side seams such as may be used for training pants. One or more of the side panels may be constructed from a plurality of pieces.
